

## Net-Tech 90-Day Compliance Jumpstart

### From Proof to Protection: MSSP + Compliance That Moves the Needle

In today's breach-heavy landscape, compliance is no longer just about passing an audit — it's about proving resilience.

Regulators, insurers, and customers are demanding proof, not promises of your security posture. Fines, lost contracts, and reputational damage are hitting harder — especially for SMBs in high-liability sectors like healthcare, finance, manufacturing, and legal.

That's why Net-Tech built the 90-Day Compliance Jumpstart — a practical, MSSP-backed framework to secure your environment, meet your obligations, and create a compliance capability that scales — without overbuilding or overspending.

### The 90-Day Framework

Our model divides your first 90 days into three focused phases:

#### Phase 1 — Discover & Prioritize (Days 1–30)

- Conduct a rapid risk assessment aligned to the framework(s) you are working towards, i.e. NIST CSF, HIPAA, PCI-DSS, or CMMC
- Inventory sensitive data, critical systems, and vendor relationships
- Identify high-risk gaps and quick-win remediations
- Assign internal owner(s) and initiate evidence tracking for compliance proof

**Outcome: Baseline compliance score + top 3 risks prioritized with action items**

#### Phase 2 — Implement Core Controls (Days 31–60)

- Deploy Tier 1 policies: Access Control, Incident Response, Acceptable Use
- Apply foundational technical controls (MFA, encryption, backup verification)
- Conduct company-wide security awareness training
- Establish vendor risk evaluation checklist

**Outcome: Core security and compliance controls deployed, documented, and staff-enabled**

### Phase 3 — Operationalize & Plan Forward (Days 61–90)

- Conduct a tabletop incident response drill
- Finalize and organize compliance documentation, logs, and remediation notes
- Generate an audit-ready risk report with supporting evidence
- Build your next 90-day compliance + security roadmap with your vCRO

**Outcome: Fully documented compliance packet ready for insurers, partners, and auditors**

### Quick Wins in Your First Quarter

- Identify and close your top 3 risk gaps
- Deploy, test, and document a working incident response plan
- Train 100% of employees on cyber hygiene
- Create a compliance “core packet” for insurers, partners, or auditors

### Supporting Tools from Net-Tech

- Compliance Policy Starter Kit
- Risk Assessment Template
- User Awareness Checklist
- Remediation Tracking Worksheet

***(Available for download when you schedule your Cyber Health Check or Strategy Session)***

### Compliance Is Not a Checklist — It’s a Capability

Every 90 days, your compliance maturity grows — and so does your resilience, your partner trust, and your competitive edge.

Don’t wait for an audit. Don’t wait for a breach.  
Build a resilient, compliant operation now.
